

Serial No. 10/524,061

Attorney Docket No. 24-018-TN

RECEIVED
CENTRAL FAX CENTER
APR 24 2008

LISTING OF CLAIMS:

1-5 (Canceled)

6. (Currently amended) An optical disk producing sheet, comprising:

~~a top release sheet;~~

a stamper-receiving layer that is energy rays-curable and has a storage elastic modulus prior to curing from 10^3 to 10^7 Pa;

an adhesive layer laminated to the stamper-receiving layer, the adhesive layer having adhesive strength to polycarbonate of at least 200 mN/25mm and a storage elastic modulus during the curing of the stamper-receiving layer of from 10^3 to 10^7 Pa; and

a top release sheet and/or a bottom release sheet.

7. (Previously presented) The optical disk producing sheet according to claim 6, wherein the adhesive layer is a pressure sensitive adhesive.

8. (Previously presented) The optical disk producing sheet according to claim 7, wherein the pressure sensitive adhesive includes an acrylic ester copolymer.

9. (Previously presented) The optical disk producing sheet according to claim 6, wherein the stamper-receiving layer includes an acrylic ester copolymer having an energy rays-curable group on a side chain thereof.

Serial No. 10/524,061

Attorney Docket No. 24-018-TN

10. (Previously presented) The optical disk producing sheet according to claim 1, wherein the stamper-receiving layer contains a carboxyl group-containing copolymer obtained by copolymerizing at least one type of monomer having a carboxyl group.

11. (Previously presented) An optical disk comprising a laminate obtained from an optical disk producing sheet, the laminate including:

a stamper-receiving layer that is energy rays-curable and has a storage elastic modulus prior to curing from 10^3 to 10^7 Pa; and

an adhesive layer laminated to the stamper-receiving layer, the adhesive layer having adhesive strength to polycarbonate of at least 200 mN/25mm and a storage elastic modulus during the curing of the stamper-receiving layer of from 10^3 to 10^7 Pa.

12. (Previously presented) The optical disk producing sheet according to claim 11, wherein the adhesive layer is a pressure sensitive adhesive.

13. (Previously presented) The optical disk producing sheet according to claim 12, wherein the pressure sensitive adhesive includes an acrylic ester copolymer.

14. (Previously presented) The optical disk producing sheet according to claim 11, wherein the stamper-receiving layer includes an acrylic ester copolymer having an energy rays-curable group on a side chain thereof.

Serial No. 10/524,061

Attorney Docket No. 24-018-TN

15. (Previously presented) The optical disk producing sheet according to claim 11, wherein the stamper-receiving layer contains a carboxyl group-containing copolymer obtained by copolymerizing at least one type of monomer having a carboxyl group.
